No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                             Description

RNA prepared and library constructed by W. Walter Lorenz, School of

Porestry, University of Georgia; plant material prepared at the

Porestry, University of Georgia; plant material prepared at the

University of Florida; sequencing done in the Laboratory for

Genomics and Bioinformatics, University of Georgia. Sequence ends

have been trimmed to exclude vector and regions below Phred quality

16. Three-prime sequences are presented as their reverse complement
and have been trimmed to exclude polyA.

Seq primer: JENREV (CAGGAAACAGCTATGACC).
